

Why Wary?

Wary is the only accident detection app using ML on android.

In case of an accident it sends an SMS alert to the nearest hospitals, and given close contacts.

Wary decreases the chances of a false alarm, i.e., it does not trigger when the phone just falls or shakes.

The image shows the login screen of the 'Wary' app. At the top, there is a logo with a stylized car icon and the word 'Wary' in a script font. Below the logo, there are two input fields: 'Type your Email' and 'Type Your Password'. The password field has an eye icon to toggle visibility. A blue 'SIGN IN' button is positioned below the password field. At the bottom, there is a link that says 'Not registered yet? Sign Up !'. The background of the app interface features large, overlapping blue and teal circles.
